DETAILED ACTION

The following is an examiner's statement of reasons for allowance: The present invention is directed to a condenser microphone having a hydrophobic layer to prevent stiction between the inner surfaces. Independent claims 23, 42 and 43 identify the uniquely distinct feature of a hydrophobic layer, provided on the inner surface of the back-plate and/or on said inner surface of the diaphragm. The closest prior art, Loeppert (US 5870482) teaches silicon condenser microphone with an external voltage bias source and Sprenkels (US 4910840) teaches an electret transducer with a hydrophobically treated dielectric layer. The prior art fails to anticipate or render the independent claims obvious.

The following references were cited: Cabuz (US 5822170) teaches hydrophobic coatings on the inner layers of an electrostatic actuator; Tsuchitani (US 5367429) teaches a transducer utilizing internal hydrophobic layers to prevent sticking of the actuator and Himori (US 6512833) teaches an electret condenser microphone.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
